### Root to Node Median

### April 2024

# Question

Consider a binary tree with n vertices. Each vertex is represented by an index and a value. The indices range from 0 to n-1. The binary tree is represented in the form of a parent array p where  $p_i$  is the parent of the vertex with index i. The parent of the root node is -1. Find out the median of values of the vertices from the root node to itself, for every vertex.

### Input

First line of input contains the number of nodes n.  $n \le 10^5$ The second line of input contains the parent array.  $-1 \le p[i] \le n-1$ The third line of input contains value array  $1 \le value[i] \le 10^9$ 

### Output

Output median of values of nodes from root to every node, seperated by space.

#### Note

#### Input 1

 $5\\-1\ 0\ 1\ 2\ 3\\2\ 4\ 5\ 4\ 3$ 

#### Output 1

 $2\ 2\ 4\ 4\ 4$ 

# Input 2

 $5\\-1\ 0\ 0\ 1\ 1\\9\ 4\ 9\ 9\ 9$ 

## Output 2

9 4 9 9 9
